Team management for the mobile generation.

With CrunchTime! TeamworX™ the staffing process is streamlined with mobile scheduling functions that allow managers to keep up with staff requests and automate schedule changes.

Right from their smartphone, tablet or desktop, managers can view the schedule, approve staff requests, and communicate messages to relevant team members about shift openings or important updates. The restaurant staff can just as easily offer, pick-up and swap shifts right from their own smartphones, tablets or desktop computers.

Better planning means happier guests at the lowest labor cost

Right Staffing – Reduce the costs associated with over and under-staffing. Use smart templates to create labor schedules based on sales and guest-traffic forecasts, as well as past consumption and traffic patterns.

Menu Mix Scheduling – You know which items sell best, and who’s required to prep, produce, and serve them. By linking those menu items with the associated job codes, your schedules will always have the right people on staff, at the right time.

Enforce best labor practices in every location

Labor Law Compliance – Enforce compliance with local, state, federal and company labor laws, including break laws, minor laws, and overtime guidelines.

Staffing Templates – Minimize labor costs by correlating your sales range to the optimum number of scheduled employees in each position.

Shift Management – Define the rules and relationships between time-of-day, job codes, skills, tasks, and menu items that underlie schedules, training, skill certifications and task assignments.

Security – Information and system access is secure and audit trails are created for all critical transactions.

Multi-Language – Users can log on in the language of their choice, ensuring concise communication.

Employee Sharing – Manage and share employees across locations and across different job codes.

Scheduling Adjustments – 100% web-based solution delivers access to schedules 24x7 from any browser.

Fact-based reporting for smarter decision-making

Performance Management – Reward top performers and coach more effectively by tracking employee performance, attendance, and task completion.

Overtime Alerts – Adjust schedules and reduce unnecessary costs by receiving system-generated alerts before overtime violations occur.

Enterprise View – Gain a comprehensive view of your workforce, with full integration to your business systems including POS, Payroll, Time Clock and Biometric devices.

Why TeamworX works...

Makes shifts easier to schedule and swap

Simplifies manager communications and workflows

Empowers staff

Facilitates collaboration and teamwork

NO apps to download, totally web-based and device-aware

Secure and creates audit trails

Seamlessly integrates with CrunchTime! Net-Chef restaurant system
